# Evidence-Based Management of Early Stage and Metastatic Colorectal Cancers: For FRCS (General Surgery) Exam

Feedback - March 2021

## Evidence-Based Management of Early Stage and Metastatic Colorectal Cancers: For FRCS (General Surgery) Exam

Colorectal cancer is one of the world's deadliest cancers, with almost a million deaths annually. Advances in the pathophysiological and molecular understanding have increased the range of treatment options available, including endoscopic and surgical excisions, downstaging preoperative radiotherapy and systemic therapy, local ablative therapies for metastases, palliative chemotherapy, targeted therapy, and immunotherapy. Although these novel treatment options have doubled the overall survival for advanced disease, survival is still best for those with non-metastatic disease. This talk, by Dr Kai-Keen Shiu, discussed the rationale behind and the advances in the peri-operative treatment of colonic and rectal cancers, the rationale behind and the advances in the management of operable metastatic disease, and the management of the molecular subgroups. The talk was aimed at surgical trainees at a registrar level and, specifically, those preparing for the FRCS (General Surgery) Exit Exam.
